## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Lee Stepina on 5 June 2009.

*The application has been amended as follows:*

*Claim 1:*

at line 6: insert the word "and" between the words "opening" and "in"

at line 16: insert the words "chamber side" between the words "a" and "surface"

at line 25: replace the words "a chamber side surface" with the words "the chamber side surface"

*Claim 4:*

at line 5: insert the word "and" between the words "opening" and "in"

at line 17: insert the words "chamber side" between the words "a" and "surface"

at line 26: replace the words "a chamber side surface" with the words "the chamber side surface"

*Claim 5:*

at line 2: replace the word "tab" with the word "flange"

***Allowable Subject Matter***

2. Claims 1-6 and 9-12 are allowed.

3. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or fairly suggest a wafer processing apparatus including a chamber wall therein and configured to transfer a wafer between a clean box having a housing with an opening configured to be closed by a lid to house the wafer in the housing and the chamber, wherein the housing has a flange extending from the opening of the clean box toward a side opposite to the opening and in a surface-plane direction of the opening of the clean box around an entire perimeter of the opening of the clean box, said apparatus comprising: a first opening portion formed on the chamber wall, for communicating with an outside of the chamber, said first opening portion facing the opening of the clean box which allows loading or unloading of the wafer between the clean box and the chamber, wherein when the wafer transferring operation is performed, the clean box is fixed to overlap the flange of the clean box over an outside surface of the wall on which the first opening portion is formed with a first clearance formed around the entire perimeter of said first opening portion, the first clearance being defined by a predetermined constant distance along an entire perimeter of the opening of the clean box between a chamber side surface of the flange and the outside surface of the chamber wall on which the first opening portion is formed, wherein the clean box is settable in a manner where an outermost peripheral edge of the clean box is positioned closer to a center of said first opening in portion in a direction parallel to the

Art Unit: 1792

plane of the chamber wall so that a part of an airflow from the inside of the chamber at the peripheral edge of said first opening portion in a direction normal to said first opening portion hits the chamber side surface of the flange to direct an airflow in the direction. Further, no other properly combinable prior art, along with the requisite motivation(s), was located that fairly suggested the features of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
